trusted results in ostomy

**All silicone protection ...
sometimes, your skin
needs a little help.**

Skin is the largest organ of your body and usually provides an excellent barrier function. For many people however, keeping skin healthy becomes a daily challenge. Leakage, irritation, discomfort and lack of security are amongst the most common problems associated with today's current ostomy products. Trio's new and advanced, silicone technology offers many benefits over traditional and rather outdated hydrocolloid ostomy devices.

Our new, custom-formulated silicone adhesives deliver instant and secure adhesion to the skin, whilst being atraumatic on removal. Furthermore, our adhesives leave no residue on removal resulting in a quicker, cleaner pouch change regime. Significantly, our adhesives do not absorb large amounts of moisture and body waste and are therefore more hygienic to use. They retain their integrity and shape for extended wear time but allow the skin to breathe resulting in reduced risk of maceration and healthier skin.

trusted results in ostomy

The future of ostomy care ... has arrived.

Ostomy applications require robust adhesives that maintain adhesion in a challenging environment and in a location on the body that is seldom flat. Conventional silicone gels (as seen in wound care) do not allow the skin to breathe. However, Trio's custom formulation of silicone gel adhesives overcome the limitations of conventional silicone gels – **the future of ostomy care has arrived.**

The table below shows the difference between Trio's advanced silicone technology and traditional hydrocolloid adhesives:

Clinical need	Hydrocolloid adhesives	Trio's advanced silicone technology
Instant adhesion	Poor instant adhesion due to non-adhesive hydrocolloid fillers used in final composition	Instant adhesion due to low surface energy and high flexibility of silicone polymers
Adhesion level does not increase over time (resulting in ease of removal and reduction in 'skin stripping')	Increases over time due to the adhesive matrix flowing into skin (non - cross-linked polymer)	No significant change in adhesion over time (cross-linked polymer)
Hygienic	Absorbs faeces and urine	Non-absorbent but breathable to moisture
Clean removal (no residue)	Breaks down in the presence of faeces and urine	Maintains integrity and shape in the presence of faeces and urine allowing for one piece removal - leaves no residue

Still getting leaks, discomfort, irritation and lack of security?

Feel the difference, experience the benefit of our advanced silicone technology.

Siltac® – silicone ostomy seal – skin friendly protection

**To date, you have had a limited choice in ostomy seals.
All current products comprise of a hydrocolloid formulation.
All current products suffer from the same set of problems.**

Hydrocolloid seals or rings absorb moisture (and body waste!). As the hydrocolloid 'swells' the seal around the stoma becomes better. Level of absorption therefore becomes one of the most important attributes of a hydrocolloid seal.

We believe that having an adhesive containing faeces and urine on your skin for lengthy periods of time is not a hygienic solution to protect against leakage. The removal of a hydrocolloid seal or ring is sometimes difficult due to the absorption of moisture (and body waste!) which leads to the breakdown and failure of the product. This results in the need to repeatedly clean the skin to remove residue and ensure correct fitment of your next ostomy appliance.

Trio Siltac® is a soft silicone ostomy seal that works completely differently. It does not absorb moisture or body waste; for the first time you can have a clean and hygienic seal. Trio Siltac® seals have a natural tendency to return to their original shape when stretched. This means you simply stretch a Trio Siltac® seal around your stoma, and shape to form a perfect custom fit. Trio Siltac® removes in one piece leaving no residue – your pouch change regime can now be quicker, easier and cleaner.

trio ostomy care USA

- Maintains integrity & shape to provide a longer-lasting seal
- More hygienic than traditional hydrocolloid products – does not absorb faeces or urine
- Allows the skin to breathe
- Reduced risk of leakage – extends wear time of your ostomy appliance
- Stretch around your stoma & shape to create a perfect custom fit
- Trio Siltac® conforms to the shape of your stoma
- Promotes comfort due to high level of flexibility
- Instant adhesion – better seal formed
- One piece removal – leaves no residue
- Atraumatic removal – less skin irritation

Innovative use of soft silicone technology to produce an ostomy seal that allows the skin to breathe, stretches to shape and lightly hugs the stoma. Maintains integrity & shape to provide a good seal and extend wear time of ostomy appliances.

Silvex® – silicone convex seal – soft silicone convexity

Designed with the wearer in mind, Trio Silvex® offers a soft silicone seal for use when mild convexity is required. The skin-friendly, soft silicone gel allows for greater comfort whilst providing instant adhesion and a perfect custom fit.

Trio Silvex® will stretch around your stoma filling creases and contours through close conformity, reducing any gaps between the skin and the seal where effluent can escape.

Trio Silvex® is a soft silicone convex seal that works completely differently to traditional hydrocolloid products. It does not absorb moisture or body waste – for the first time you can have a clean and hygienic seal. Trio Silvex® convex seals have a natural tendency to return to their original shape when stretched. This means you simply stretch a Trio Silvex® seal around your stoma and shape it to form a perfect custom fit.

Trio Silvex® removes in one piece leaving no residue – your pouch change regime can now be quicker, easier and cleaner.

- Maintains integrity & shape to provide a longer-lasting seal
- Provides mild convexity
- More hygienic than traditional hydrocolloid products – does not absorb faeces or urine
- Allows the skin to breathe
- Reduced risk of leakage – extends wear time of your ostomy appliance
- Stretch around your stoma & shape to create a perfect custom fit
- Trio Silvex® conforms to the shape of your stoma
- Promotes comfort due to high level of flexibility
- Instant adhesion – better seal formed
- One piece removal – leaves no residue
- Atraumatic removal – less skin irritation

Innovative use of soft silicone technology to produce a convex seal that allows the skin to breathe, stretches to shape and lightly hugs the stoma. Giving mild convexity, maintaining integrity & shape to provide a good seal and extend wear time of ostomy appliances.

Silex® – silicone flange extender

– improved security & peace of mind

When extra adhesion and enhanced protection against leakage is required, Trio Silex® soft silicone flange extender is your product of choice. Designed to ensure the edges of your base plate do not lift, but instead are kept securely in place, Trio Silex® is probably the most flexible and secure ostomy fixation device available.

With its instant, high-tack, soft silicone gel adhesive, Trio Silex® will allow for significantly more freedom of body movement than hydrocolloid products. This is due to its very thin profile and flexible construction. For use on either one or two-piece ostomy appliances, keeping your base plate secure can mean longer wear times, greater comfort and peace of mind.

Removal of Trio Silex® is easy – high-tack adhesion but removes in one piece leaving no residue, Trio Silex® allows your skin to breathe, resulting in reduced risk of maceration and healthier skin.

- Improved security & increased wear time
- Instant, high-tack, soft silicone gel adhesive
- Designed for optimal fit for all ostomy appliances
- Highly flexible – allows for more freedom of body movement
- Thin profile – for greater comfort and flexibility
- One piece removal – leaves no residue
- Allows the skin to breathe – reduced risk of maceration & healthier skin

Trio Silex® has been carefully designed to provide the best fit for your ostomy appliance. By providing more area of adhesion to the base plate you can be sure of the highest level of security.

Trio Silex® – carefully developed for you.

Trio Silex® flange extender – vertical application

Trio Silex® flange extender – horizontal application

Advanced, soft silicone gel flange extender that provides instant, high-tack adhesion to skin. Can improve security & increase wear time, allowing greater freedom of body movement. Allows skin to breathe, reducing risk of maceration and removes in one piece leaving no residue.

Silken® – silicone stoma gel

– one piece removal, leaves no residue*

Have you ever wished that you could remove your hydrocolloid paste or strip in one piece leaving no residue? We thought you should be able to, so we developed Trio Silken®.

Trio Silken® is a silicone gel that is used to fill skin folds, creases and uneven areas around the peristomal skin to provide a better surface for the application of an ostomy appliance. Unlike hydrocolloid pastes or strips, Trio Silken® will not absorb moisture or body waste and will not break down, leaving you with a difficult and messy substance to remove. Instead, as wear time progresses, Trio Silken® cures to a single piece of silicone adhesive that removes in one piece when fully cured.

Being sting-free on application and allowing your skin to breathe, Trio Silken® remains soft and flexible to ensure comfort. Trio Silken® can be used to create a perfect custom seal around the stoma, particularly useful for irregular-shaped or difficult to manage stomas.

Benefit from the improved quality of life through the avoidance of effluent leakage and consequential skin excoriation and faecal malodour – try Trio Silken® soft silicone stoma gel and be amazed at how easy it is to remove!

trio ostomy care USA

*when fully cured

- Fills skin folds, creases and uneven areas around the stoma
- Creates a smooth surface for easy pouch adhesion
- Will not sting on application
- More hygienic than traditional hydrocolloid products – does not absorb faeces or urine
- Remains soft and flexible to ensure comfort
- Allows the skin to breathe
- One piece removal – leaves no residue*
- Atraumatic removal – less skin irritation

Innovative use of silicone technology to produce a soft silicone stoma gel that fills surgical scars, skin folds, creases and uneven surfaces, removing in one piece when fully cured. Allows the skin to breathe and remains soft and flexible to ensure comfort.

Elite® – sting free adhesive remover

When **quick, painless and atraumatic** removal of medical adhesives from skin is required.

The next generation of silicone medical adhesive removers has arrived! A new 100% silicone formulation that has been carefully designed for you. Trio Elite® does not use a traditional propellant and will not feel cold when coming in contact with your skin. Spraying at any angle, with a gentle action, Trio Elite® has a controlled & directional spray pattern for longer lasting use* Elite by name, Elite by nature!

Ostomy Care - pouches

Ensuring a good seal between the ostomy wafer and the skin is essential to preventing leakage. The strong adhesives necessary to achieve this can cause pain and trauma on removal often damaging your peri-stomal skin. Trio Elite® can release even high-tack adhesives quickly & efficiently!

Wound Care - dressings and fixation devices

The new, 100% silicone technology of Trio Elite® will painlessly remove dressings, tapes and fixation devices without causing trauma to the skin.

* by comparison to other well known medical adhesive removers

Trio Elite® is hypoallergenic and the aerosol even **sprays at any angle!**

trio ostomy care USA

- Will not sting, even on sore skin
- Releases adhesives quickly
- Sprays at any angle
- Controlled & directional spray pattern for longer lasting use
- Will not affect adhesion of the next Ostomy appliance, dressing or tape
- Dries in seconds – leaving no residue

Remove unwanted stickyadhesive residue

Most medical adhesives are designed to adhere to undamaged, clean skin. Gently remove unwanted sticky residues with Trio Elite® soft wipes to ensure the skin is prepared for the next ostomy appliance or adhesive product.

- 30 large soft wipes
- Creates a clean surface for the next appliance or dressing

Order your **FREE** sample at: TrioOstomyUSA.com

Elisse® – sting free skin barrier

All silicone protection...

Sometimes, your skin needs a little help.

Skin is the largest organ of your body and usually provides an excellent barrier function. For many people however, keeping skin healthy becomes a daily challenge. Using the latest in silicone technology, Trio Elisse® has been carefully developed to protect skin from irritation caused by the damaging effects of adhesives and body fluids. The next generation of silicone liquid skin barriers has arrived!

Ostomy Care - pouches

The soothing and hypoallergenic Trio Elisse® formulation creates a breathable and durable barrier between the wafer and skin. Due to the unique and innovative formulation, Trio Elisse® will soothe reddened and sore skin and reduce itching. Trio Elisse® will not cause any build up on the skin surface unlike some skin barriers. Use at every pouch change and feel the difference!

Wound Care - dressings and fixation devices

Peri-wound skin can become macerated and delicate. Trio Elisse® sting free skin barrier is formulated to protect the skin from the damaging effects of exudates, enzyme attack and adhesives.

Trio Elisse® soothes reddened and sore skin.

Reduces itching!

- Protects skin from the damaging effects of adhesives and body fluids
- Soothes reddened and sore skin
- Reduces itching
- Will not sting, even on sore skin
- Dries quickly – apply next adhesive in seconds
- Sprays at any angle
- Will not cause build-up of layers
