

Siltac® and Silvex® Silicone Ostomy Seals

here's a
peek at
preventing
leaks...

trio ostomy care™

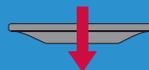

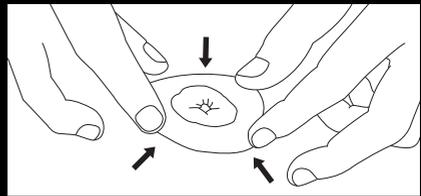

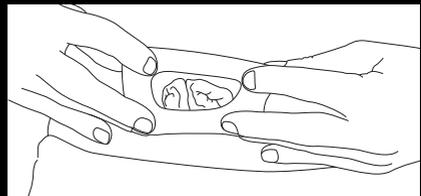

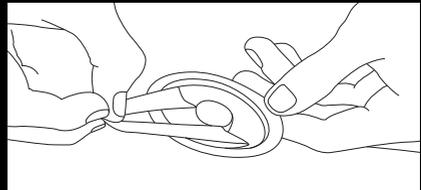

why is **Sil2** Breathable Silicone Technology® great for skin?

Sil2 Breathable Silicone Technology® is a unique silicone adhesive blend that feels and breathes just like normal skin. It sticks exceptionally well but doesn't absorb moisture. So it won't swell, become mushy, create a goopy mess, or cause pain when you remove it - which means you can wear it for longer without worrying about leaks.

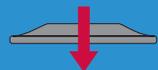

how to use:

1. Clean the area around the stoma. It's important to make sure the skin is dry, as **the seal won't stick to wet skin.**
2. Using your thumb and forefinger, carefully pull the seal from its pack. It's normal for the seal to be fixed to the blister pack, but it's strong enough for you to pull and stretch it free without damage.
3. Take the edge of the seal in both hands and stretch it around the stoma. You can then allow the seal to retract around the stoma to form a comfortable seal.
4. The ostomy seal stretches to fit around the stoma. So there's no need to mold it into shape. Its gentle elasticity will hug the stoma to form the seal.
5. Once it has sealed around the stoma, gently press the seal onto your skin. Place the ostomy pouch directly onto the seal as usual, and hold it in place until it feels secure.

CONVEX

CONCAVE

Convex seals are versatile and can be applied in two ways, either convex side up or convex side down, so that gentle pressure can be applied directly around your stoma to create a secure fit, whichever works best for you.

the first silicone ostomy seal that provides a perfect fit

Siltac® and Silvex® Silicone Ostomy Seals are available in flat and convex to suit all stoma types.

Snug, customized fit

Hugs the stoma, eliminating gaps and leaks

Comfortable and secure

Responds to body movement

Quick and easy to apply

Simply stretch around the stoma without warming or shaping

Protects delicate skin around your stoma

Protection from stool and urine, allowing skin to heal naturally and remain healthy

Longer wear time

Unique Sil2 Breathable Silicone Technology® doesn't absorb bodily fluids so it won't become gooey, mushy, or break down

Also available! Silvex® Convex Ostomy Seals

Ideal for flat or inverted stomas or uneven skin

Siltac® and Silvex® Silicone Ostomy Seals

Our flat and convex seals are part of a complete range of Trio® solutions. Your stoma may change shape and size but our seals will flex and move with your stoma. Find the best one for you by selecting your stoma size and choosing 1, 2, or 3.
